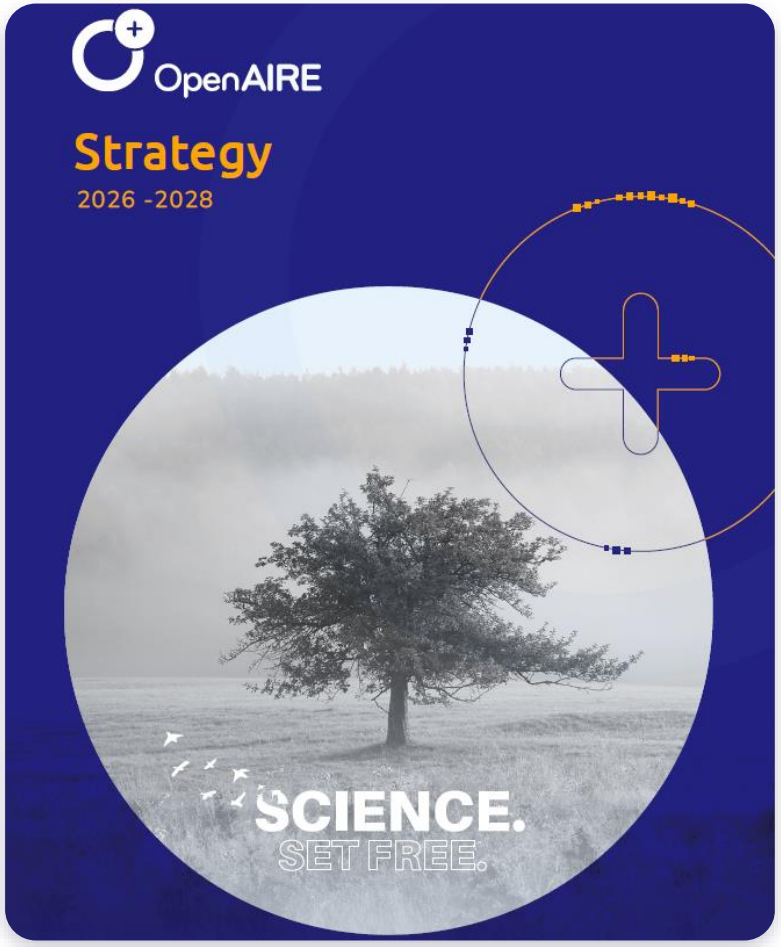
OpenAIRE 2026–2028: five priorities



Research intelligence as public infrastructure

If research is a public good, the intelligence derived from it must be open, trusted and accountable.

01	**Trusted open infrastructures**	Open infrastructures as the default in national and institutional strategies
02	**Responsible AI in research**	Built on open, FAIR and traceable foundations, governed in the public interest
03	**Insightful Open Science monitoring**	Transparent, open tools for funders and institutions to track and improve
04	**A skilled Open Science community**	Skills, training and support for researchers, institutions and policymakers
05	**Legal clarity for responsible Open Science**	Protecting IPR, strengthening digital sovereignty, enabling AI-driven research
