

## **B2Share**

# Easy data deposit & share

Ilja Livenson PDC/SNIC October 28, 2013

### Motivation

- Address the "long tail" of "small" data and the researchers/citizen scientists creating/manipulating them
- EUDAT will offer a simple storage service B2Share to
  - Offer a service to everyone with a data
  - Get a wide visibility in the research world

Address the many researchers and citizen scientists and not just the "few" organized in large communities

- Make data accessible, shareable and persistent
- Offer a strong European service

EUDAT Simple Store

Number of Objects

# Approach

- Start simple
- A web service with a simple deposit flow
- Integration with EUDAT services behind the curtains
- Open-source and evolving based on user feedback
- Hosted by EUDAT partners

# 

Aggregated EUDAT metadata domain. Data inventory

Data curation and access optimization

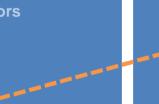

#### **Data Staging**

Researcher data store (simple upload, share and access)

#### AAI

Network of trust among authentication and authorization actors

#### **PID**

Identity
Integrity
Authenticity
Locations

# services to come

#### **EUDAT Box**

dropbox-like service easy sharing local synching

#### **Semantic Anno**

Simple Store

checking & referencing

#### **Dynamic Data**

immediate handling

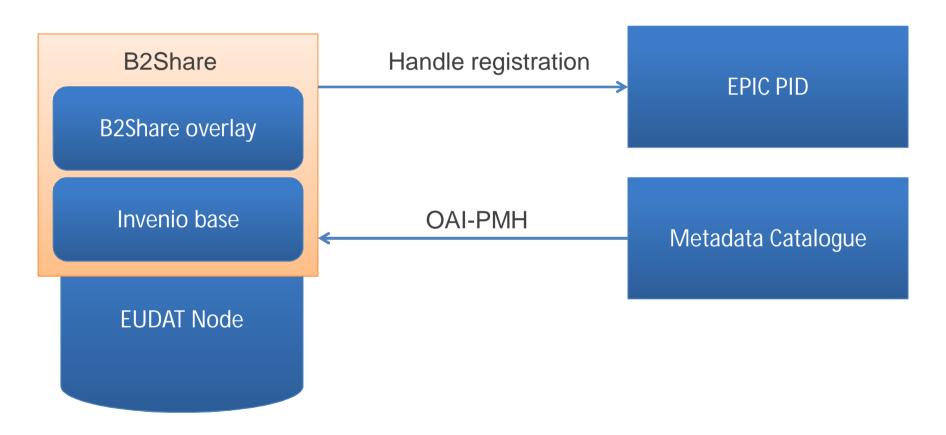

### **B2Share functionality**

- Data upload
  - Metadata tagging
  - Parameterized by the scientific domain
- Search and retrieval
- Persistent references
- Metadata export

### **Architecture**

#### Invenio features

- navigable collection tree (regular, virtual)
- powerful search engine
  - combined metadata, reference and fulltext search
- flexible metadata (MARC, OA)
- handling any kind of document (multimedia)

- customizable input, formatting and linking
- personalization and collaborative features:
  - alerts, baskets, groups, reviews, comments
- internationalisation (28 languages)

# B2Share deposit flow

Upload

- Select one or more files
- Click to start uploading

Domain

- Pick a scientific domain of submission
- Modifies the metadata enrichment form

Metadata

- Domain dependent
- Configurable to simplify adding new domains

## B2Share security model

- All metadata is public
- Data can be marked as private in this case accessing the data files will result in a 403 code
- More elaborate models will follow
  - E.g. sharing only among collaborators

### Metadata Model

- All submission have a generic metadata associated with them
  - Title, description, tags, etc
  - DataCite-compliant
- Domain specific metadata is requested \_only\_ if a specific domain is selected
  - Areas of science: e.g. ecology, linguistics
  - Projects: e.g. DRIHM, CLARIN
- Input fields + validation are automatically generated from the metadata description

### Integration with EUDAT services (existing)

#### EPIC PID

- On deposit EPIC service is contacted to register a UUID
- UUID is embedded into the metadata record of the entry
- Metadata catalogue
  - B2Share exposes metadata via OAI-PMH protocol
  - Metadata catalogue consumes it and maps to its standard model

#### B2Share vs Zenodo

- Are based on the same framework (Invenio)
- B2Share is more 'lightweight'
  - Leverages on the EUDAT services
- Zenodo targets 'high-quality' data, i.e. publications and associated data
- B2Share aims at offering a more generic submission mechanism for multiple scientific domains + EUDAT service integration

### **Technology**

- Basis for the implementation: Invenio
  - Library software
  - Mostly CERN-based development
- A separate B2Share overlay
  - Installs on top of a working Invenio instance
  - Brings models, views and deposit logic
  - flask + jinja2 + sqlalchemy
  - https://github.com/SimpleStore/simplestore

#### Diapositiva 14

1 Ilja Livenson; 21/10/2012

# Try out

B2Share instance for trying out

https://ss-dev.pdc.kth.se

Central instance will be available at:

https://b2share.eudat.eu

## Adding a new domain

- Generic domain of submission is often not enough
- B2Share supports easy way for enabling additional scientific domains
- Hopefully engaged by a community

# Defining metadata

- Define a domain description based on a template
- Add domainspecific fields

```
domain = "Cats"
table_name = 'cats_imags'
icon = 'icon-cat'
fields = [
  'name': 'funlevel',
  'display_text': "Fun level",
  'col_type': db.String(256),
  'mandatory': True,
  'extra': False,
  'description': 'Increase in the happiness
         level caused by the image'
```

# Enabling the domain

- \$ # check enabled domains
- \$ grep CFG\_SIMPLESTORE\_DOMAINS invenio-local.conf

CFG\_SIMPLESTORE\_DOMAINS = generic, drihm, eudat, ecology

\$ # append 'cats' to the list

\$ sudo -u www-data /opt/invenio/bin/ \ inveniocfg --update-all

#### **Future Work**

- Integration with further EUDAT services
  - Ingestion into Safe replication
- Increased security/privacy model
- Clean API for batch uploads

### **THANK YOU!**

#### Feedback

 We'd like to use this session also for getting immediate feedback ©

- 1. Do you think that B2Share makes sense for your needs?
- 2. What would need to be changed to make the service more attractive?
