EUDAT Collaborative Data Infrastructure services

Let's meet at: 09:00 - 12:30, Room: Lagos | 24 Jan 2018

Session Chair: Mark van de Sanden, SURFsara

You can't miss it if you are a Service Provider or a User

Objectives:

- Showcasing the solutions developed by EUDAT to address the data management needs of researchers and research communities
- Presenting the Collaborative Data Infrastructure service roadmap
- Demonstrate specific outcomes through concrete pilots / use cases
- Pinpoint how CDI services can fit pragmatically into the EOSC landscape

More info on the session:

EUDAT offers a comprehensive suite of research data management services to help data managers rise to the challenges of handling ever-increasing volumes of data in their daily work. Covering both access and deposit, from informal data sharing to long-term archiving, and addressing the identification, discoverability and computability of both long-tail and big data, EUDAT services endeavour to address the full lifecycle of research data. The continuity of EUDAT activities will be guaranteed beyond project lifetime, by the EUDAT Collaborative Data Infrastructure (CDI) Partnership Agreement for delivery of EUDAT services going forward. Further, the evolution and future development of the B2 services will be maintained within the context of a set of initiatives such as the EOSC-hub and SeaDataCloud.

This session will provide an overview of the EUDAT B2 service suite and insight into the future development roadmap, showing how the B2 services offered are already integrated and fit into the EOSC landscape, consolidating the role of the EUDAT services as the building blocks for future research data management.
