

Two days left to register to the EUDAT conference: the final programme is out!

What does the EOSC actually mean when applied to data services? How is it related to the European Data Initiative (EDI)? The upcoming **EUDAT Conference** will take place in a week and will try to shed light on this and answer the question "*How to put the EOSC vision into practice?*".
Meet the EUDAT team, our communities and related initiatives and organisations in Porto (Portugal), from 22nd to 25th January 2018!

With less than a week to go, the EUDAT Conference will feature an interesting and engaging programme ([view it online](#)) which will go through the latest trends in data infrastructure and data management cross-community solutions for research, demonstrate the solutions developed by the EUDAT team, inform about the upcoming opportunities offered by the newly established **EUDAT Collaborative Data Infrastructure** (CDI) to the

service providers and research communities and discuss the progress of the European Open Science Cloud (EOSC) and the European Data Infrastructure (EDI) and the contribution of EUDAT as well as other infrastructures to these two initiatives.

In addition to this plethora of sessions, we are looking forward to the **plenty of opportunities to network** with the participants: meet other experts, communities and EUDAT members to learn more about services, use cases and solutions to make your research easier!

Make sure to [register online](#) by 18th January as on-site registration is not offered. **If you have already registered... mark your favourite sessions and start packing: we'll see you in Porto!**

Registration close on 18 January 2018 at midnight.
