

D4.9: Service Uptake within Communities (final)

WP:

WP4

Publication Date:

08/03/2018

Deliverable D4.9 reports on the progress over the final year with respect to the uptake of EUDAT services by the research communities associated with EUDAT and on the work done on determining the requirements of those communities in relation to service building, service extensions and service provisioning that have been extracted from the research community service uptake plans and the Data Pilot proposals. D4.9 builds on the reporting done earlier in D4.6 about the administrative process of requirements extraction and analysis. D4.9 is the final update of this series (D4.3, D4.6) and therefore also presents conclusions about the EUDAT project2020 fulfilling expectations of the communities with respect to data management service provisioning
