## EUDAT supports Blue-Cloud's federated platform

The H2020 funded project [Blue-Cloud](#) has recently released a new video mentioning their collaboration with EUDAT in their federated and powerful virtual platform for research in the marine domain. The video introduces the various infrastructures involved in making Blue-Cloud a reality, including EUDAT, and explains the core services provided to foster Open Science in the marine domain, in support of a sustainable blue economy.

The ocean is a defining feature of our planet: shaping coastlines, regulating climate, sustaining biodiversity and human life. Collecting reliable ocean data is fundamental for understanding the marine realm, preserving its precious life and managing its resources sustainably.

Blue-Cloud is a major initiative seeking to add new dimensions to the existing European marine data landscape, by empowering researchers with cloud computing resources, analytical tools and seamless access to this wealth of data, data products and services.
