

How to use & deploy the EUDAT services

This online training material provides **step-by-step instructions on how to use the EUDAT services** (B2SHARE, B2SAFE, B2STAGE and B2FIND) and **how to deploy them** (B2SAFE, B2STAGE and B2FIND).

Who is this training for?

- those who want to learn **how to deploy and integrate services** (e.g. B2SAFE and B2STAGE, B2FIND);
- and those who prefer to **learn how to use** such services.

Following the full in-depth tutorial will allow trainees to understand how the components of a service are combined. This will also enable the trainees to also extend services with their own modules and integrate EUDAT's services with their community services.

Training material & useful links

The material can be found here (<https://github.com/EUDAT-Training>) and will be updated and extended in due time when new features of services are developed.

For a general introduction we recommend to consult the user documentation pages (<http://eudat.eu/services/userdoc>) and to view our training presentations on [Slideshare](#).
