Infrastructure for Biodiversity and Ecosystem Research

The biodiversity *system* is complex and cannot be described by the simple sum of its components and relations

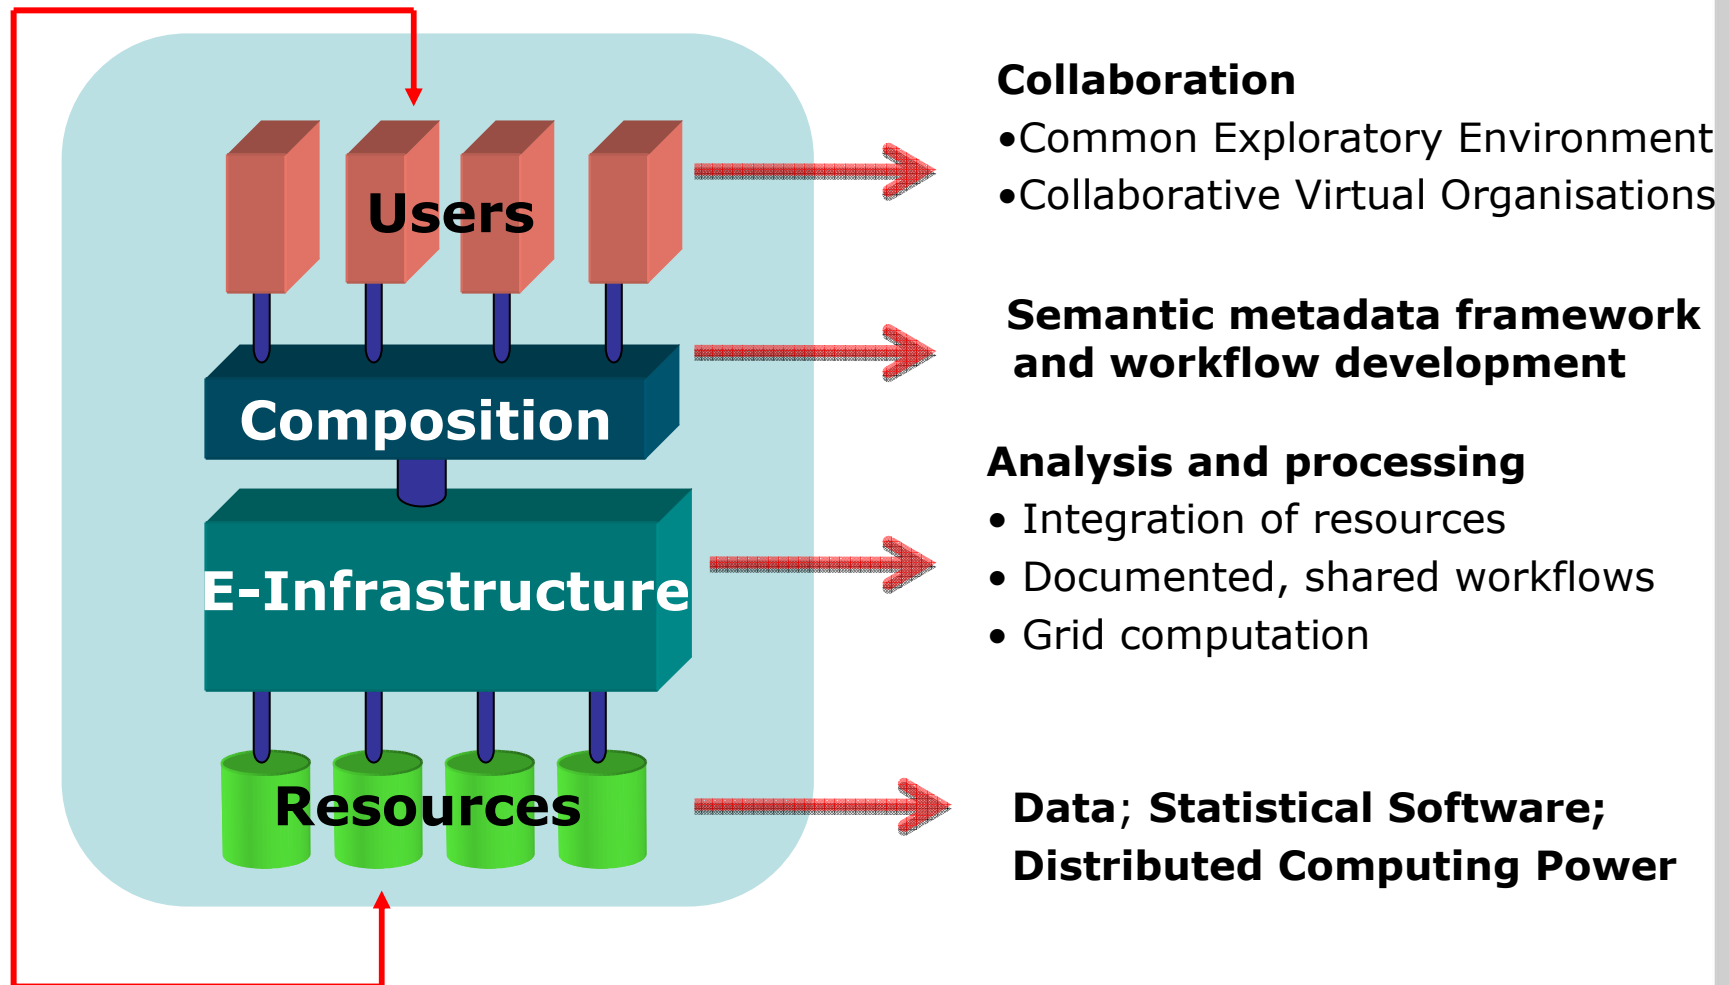

Experimentation on a few parameters is not enough:

Limitations to scaling up results for understanding *system* properties

LifeWatch adds a new technology to support the generation and analysis of large-scale data-sets on biodiversity. Find patterns and learn processes.

Architecture

Data from various origins sampled and in real time
In different spatial and temporal scales

EXTERNAL LIAISONS

CETAF - Consortium of European Taxonomic Facilities

Towards an ideal EUDAT usecase

- Choice of a REAL workflow currently elaborated by the LIFE+ project „EnvEurope“ based on the sites network of LTER-Europe
- Type of data: biodiversity data PLUS data on drivers of biodiversity
- REAL institutions, 70 sites across Europe, existing data and accessory data gathered in the field
- Use of best available and acceptable technology (not necessarily state of the art)
- Compliance with metadata standards (e.g. EML, INSPIRE)

Typical scope and design of ecosystem research sites (LTER-Europe example) challenging Information Management

Input

Ecosystem Change

Output

- primary production
- population ecology
- organic matter

- inorganic inputs
- disturbances
- **biodiversity** (implicitly)

PLUS: main drivers

Challenge for MORIS: topics, space &.... time

Challenges

Specimen Management

ID. Projekt, Datum, Ort, Art... der Probe

- Complex data sets
 - Different spatial, temporal, and thematic resolution of the observations
 - ... need for a flexible entry and management of the data

- Long project duration
 - Changes in observation methods, staff, project aims, etc.
 - ... need for flexible data structures
 - ... need for safeguarding the reusability and interpretability of the data in the long term perspective

- Meta data
 - Staff, project, methods, documents, etc.
 - ... need for the link between data and metadata to ensure the long term reusability of the data

Observation

An observation is gaining information on the...

- STATUS OF a PROPERTY
- OF a MEDIUM(object)
- AT a certain LOCATION (object)
- AT given TIME(s)
- Observed by someone/-what by use of a specific METHOD
- Reported by use of and referring to related STANDARDS (unit, reference list)

In addition:

- Method provides certain **quality of information** (accuracy, applicability constraints = primary metainformation)
- Status observed by an **observer** acting in the context of a **project**, pulling individual measurements together
- Observation specified by other **secondary metadata**

Current situation ...

Relational database
(Oracle, PostgreSQL, ...)

Relational database
(Microsoft Access)

Spreadsheet
(Microsoft Excel, etc.)

Spatial Data Files
(ESRI Shape File, etc.)

Spatial Database
(PostGIS, GeoDB, etc.)

Structured text files
(txt, csv, etc.)

Unstructured Text Files
(docs, pdfs, etc.)

Non digitised Data
(field records, etc.)

Data in proprietary Format
(Logger formats, etc.)

OGC Spatial Services
(WFS, WMS, WCS)

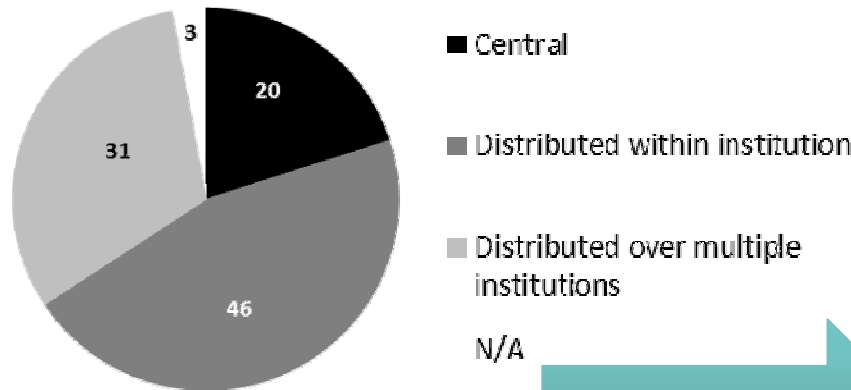

Sensor Web Enablement

Metadata Services
(CSW, proprietary)

Current situation & challenges

Places of data storage ...

Handling data requests ...

Challenges

- Distributed data sources
- Heterogeneous data access
- Heterogeneous data management solutions
- Heterogeneous data models
- Complex domain ecosystem monitoring

DATA: Data sharing

Discover available dataset series, datasets and services: a catalogue service allows the user to view and query related meta-data.

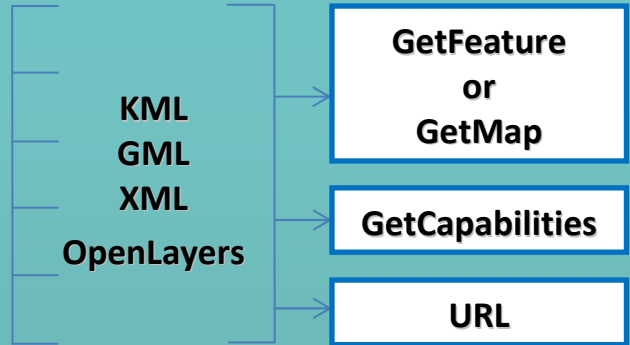

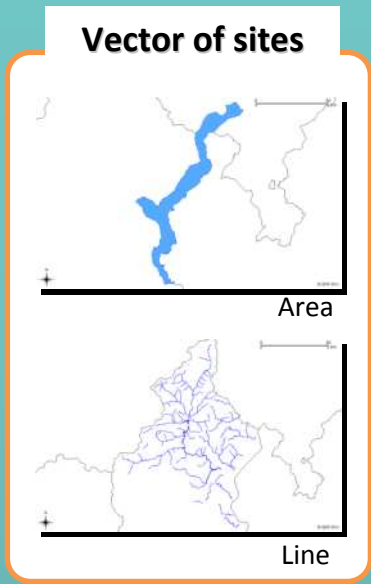

View available datasets: an online data access client allows the user to view data (WMS layers or tabular).

Download available datasets: an online data access client allows the user to download data

- Data files
- OGC spatial services (WFS, WCS)
- OGC Sensor Web (SOS)
- Linked Data

Harvesting Information from LTER Sites using OGC Services

for each vectors

Expectations – references to envisaged benefits from EUDAT

- according to revised introductory presentations

A photograph of a white SUV driving on a snowy road. The road is flanked by high snowbanks. In the background, there are trees and a forested hillside under a clear blue sky. A thought bubble is superimposed on the right side of the image, containing text.

**some mornings
I'd like to do some cosy
data modelling**

Thanks for your attention
